MESSAGE FROM THE CHAIRMAN OF THE BOARD OF DIRECTORS

As we pause to reflect on our journey from a Division to an Authority, the strides we have made since June 2020 fill me with a profound sense of pride and gratitude. Our collective dedication has been the driving force behind the achievements we now celebrate.

The successful appointment of key staff members stands as a testament to our commitment to becoming a world-class entity. It's encouraging to see the fruition of our efforts in the establishment of comprehensive pension and health plans, an investment in the well-being of the very individuals propelling us forward. The gazette of the Conch regulation echoes not just our adherence to global best practices but also our responsibility in shaping the narrative of responsible fisheries management. The resilience we have fostered within the sector is evident in the increased enforcement capacity and a growing culture of compliance. The recent launch of the Blue Justice Caribbean Hub is a milestone that reflects not only our regional collaboration but also our dedication to sustainable development. It's a beacon of hope and a testament to what we can achieve when we work together.

As we enter the 2024–2028 strategic cycle, I want to express the Board's unwavering support for the outlined goals and strategic objectives. Each member of the NFA team has played a pivotal role in bringing us to this point, and I extend my appreciation. Let us embrace the strategic objectives ahead with renewed commitment, knowing that our pursuit of excellence will be the catalyst for recognition.

Here's to the NFA team and the exciting journey ahead.

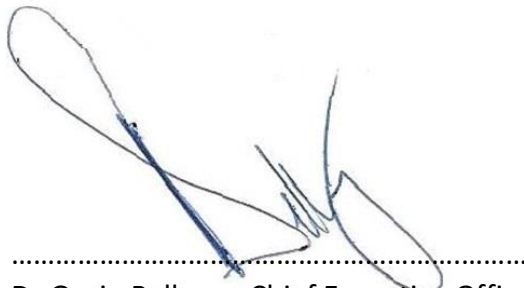

Lieutenant Commander George Overton (Retired)

MESSAGE FROM THE CHIEF EXECUTIVE OFFICER

The National Fisheries Authority has embraced its major role in leading the sustainable management of the fisheries resources, and the economic success of our Fishers and Fish Farmers. As an agency of the Ministry of Agriculture, Fisheries and Mining, the strategies of the Authority are aligned to the Ministry's overall strategic priorities and the New FACE of Food campaign.

This 2024-2028 Strategic Business Plan is the culmination of many hours of hard work and dedication to structure a plan within the Authority's mandate as outlined in the Fisheries Act, 2018, while building on the many successes achieved since the Fisheries Division transition to the National Fisheries Authority.

I must take the opportunity to thank the staff for their hard work, dedication and commitment to the service of Fishers and Fish Farmers as we build our nation through sustainable fisheries management. I would also like to acknowledge our external stakeholders who have supported the initiatives of the Authority and helped to drive our success.

A handwritten signature in blue ink, appearing to read 'Gavin Bellamy', is written over a horizontal dotted line.

Dr Gavin Bellamy, Chief Executive Officer

1.0 SECTION A: Introduction and Overview

1.1 PURPOSE AND BACKGROUND

The National Fisheries Authority (NFA) was established as a body corporate, pursuant to Section 5(1) of The Fisheries Act, 2018, with the mandate being that the Authority will be responsible for the management and development of fisheries and aquaculture. The Authority is, therefore, the sole body with the responsibility of ensuring that there is conservation of Jamaica's fisheries; collection, compilation, and analysis of statistics for the sector; monitoring, control and enforcement of activities related to fisheries and aquaculture; as well as, granting of licences, authorisations and permits and allocation of fishing rights and quotas for all who intend to fish in Jamaica's waters. Prior to its establishment, the fisheries and aquaculture sectors were regulated by the Fisheries Division which was established in 1949 and as a government division, fell within the portfolio of the ministry with responsibility for Fisheries.

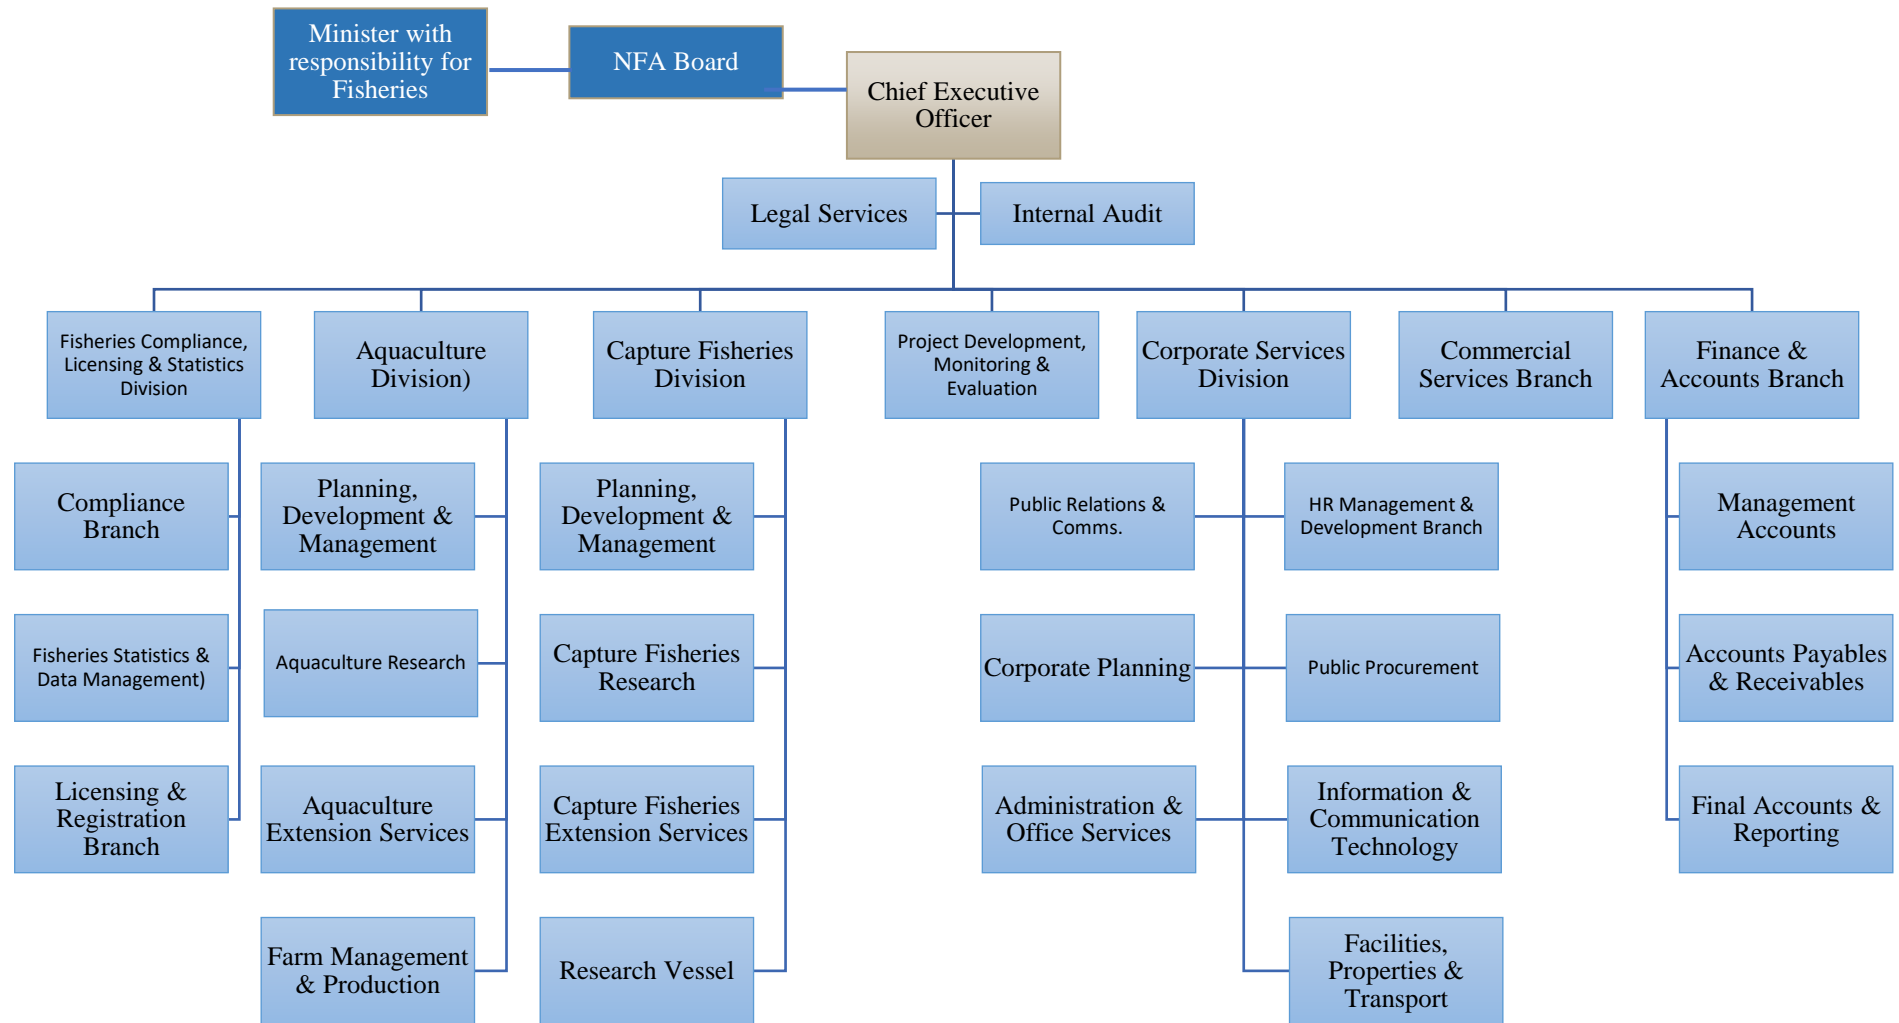

The transition to a statutory body has enabled the NFA to regulate the fisheries and aquaculture sectors more independently within the structure of a strengthened legislative framework. With the passage of The Fisheries Act, 2018, the NFA has the institutional framework to strengthen and modernise fisheries and aquaculture and there are also a number of regulations that govern the activities in and around the fisheries waters; these include the Fisheries (Conservation of Queen Conch) (Family Strombidae) Regulations, 2023. Fishing Industry Regulations (1976), Morant and Pedro Cays Act (1907), Conch (Export Levy) Act (2009), Exclusive Economic Zone Act (1991) and supporting enactments to include; Aquaculture, Inland and Marine Products and By-Products (Inspection and Licensing) Act (2013).

At the highest level, the importance of strengthening the regulation of fisheries and aquaculture has long since been identified, with the National Development Plan: Vision 2030 (2009 – 2030) highlighting the threats facing the long-term development of Jamaica's marine fisheries such as over-harvesting, habitat destruction and pollution. The sector is also faced with Illegal, Unreported and Unregulated (IUU) fishing within Jamaica's waters and these illegal activities are a direct threat to Jamaica's food and nutritional security. Under National Outcome #12 "Internationally Competitive Industry Structures," the promotion of environmental sustainability and national food security, are sector strategies that take into account the work of the NFA.

This Strategic Business Plan covers the period 2024/25 – 2027/28, identifies the issues being experienced by the fisheries and aquaculture sectors and sets clear targets for addressing these, as well as meeting the needs of key stakeholders. Some key areas of focus include establishing fish sanctuaries; developing underutilised fisheries; increasing seedstock for aquaculture and renovation of aquaculture ponds; increasing enforcement of the fisheries waters; improving licensing processes; and drafting regulations for the Fisheries Act, 2018. The plan also highlights the need for implementation of a quality management system for the Authority, recruitment and retention of technically competent staff and procurement of key infrastructure and critical resources

1.2 STRUCTURE OF THE NATIONAL FISHERIES AUTHORITY

The NFA, with a staff complement of 290 persons, is governed by a Board which gives advice to the Minister with responsibility for fisheries, while the Chief Executive Officer is responsible for carrying out the functions and managing the operations of the Authority.

Organisational Structure is general and shows managers and middle managers.

1.3 MANDATE AND GOALS

MANDATE: The sustainable management and development of fisheries and aquaculture in accordance with the provisions of The Fisheries Act, 2018.

GOALS:

- To conserve and achieve optimal production of capture fisheries resources in Jamaica's fisheries waters.
- To increase and diversify fish production through Aquaculture to increase food and nutritional security, and economic growth.
- To improve fish production and quality along our value chain to enable socio-economic benefits.
- To increase compliance with fisheries laws and regulations through education, training and effective enforcement.
- The NFA will become a world-class, knowledge-driven and sustainable organisation.

1.4 CONTRIBUTION TO GOJ MEDIUM-TERM STRATEGIC PRIORITIES

The initiatives of the NFA are in keeping with the Government of Jamaica's medium-term strategic priority – ***Inclusive Sustainable Economic Growth and Job Creation***. The programmes, initiatives and activities of the NFA also drill down from Goal 3 of the National Development Plan: Vision 2030, which is 'Jamaica's Economy is Prosperous' with the relevant outcome being Outcome 12 – Internationally Competitive Industry Structure in Agriculture and Fisheries. The NFA initiatives are also in line with the Ministry of Agriculture and Fisheries' vision which is 'By 2030, MOAF has achieved innovative, sustainable and internationally competitive agriculture sector and more specifically, the strategic priority – ***Market Driven Agriculture and Fisheries Production System*** which supports the Fisheries Development sub-programme.

The Strategic Business Plan of 2024/25 – 2027/28 was crafted in a way to ensure that all initiatives of the NFA are in line with the GOJ's overarching strategic priorities.

2.0 Section B: Strategic Framework

2.1 Mission, Vision and Core Values

VISION:

The NFA is a model of excellence in capture fisheries and aquaculture management and development.

MISSION:

To facilitate the sustainable development of the Jamaican fisheries sector, including aquaculture, through effective and efficient management, regulation, administration, and participatory governance for the benefit of all Jamaicans.

CORE VALUES:

Integrity

Accountability

Transparency

Professionalism

Fairness

Respect

Goal Oriented

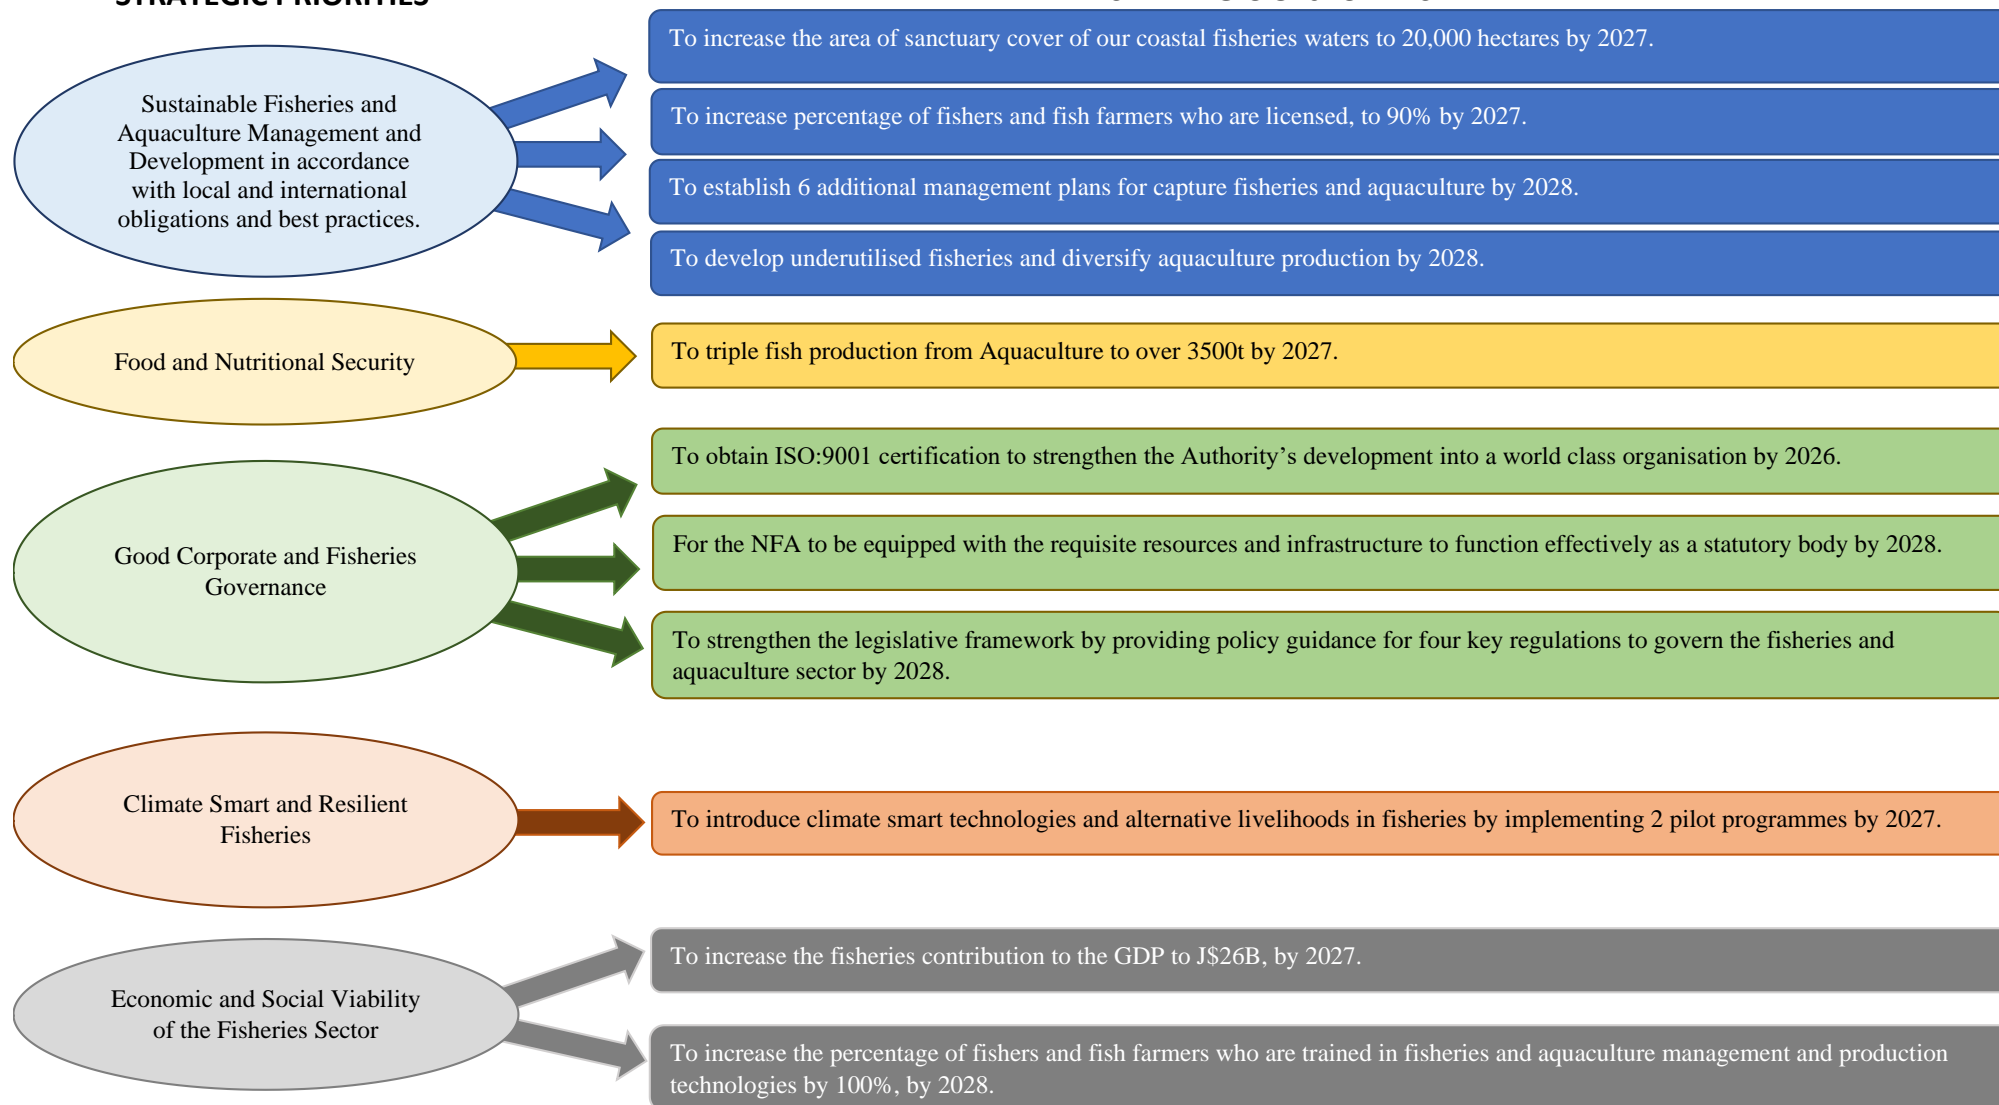

Teamwork

2.2 STRATEGIC PRIORITIES, OUTCOMES, STRATEGIC OBJECTIVES AND STRATEGIES

STRATEGIC PRIORITIES

STRATEGIC OBJECTIVES

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
Sustainable Fisheries and Aquaculture Management and Development in accordance with local and international obligations and best practices.	<ul style="list-style-type: none"> Increased sanctuary cover. Increased fish stock and biomass Habitats rehabilitated 	To increase the area of sanctuary cover of our coastal fisheries waters to 20,000 hectares by 2027.	<ul style="list-style-type: none"> Conduct Research Surveys to determine suitable sites. Consultation with key stakeholders to obtain their buy-in. Prepare boundary descriptions for sanctuary regulations and submit for them to be gazetted. Identify sources for funding (e.g. projects, Public Private Partnerships (PPP)). Sign Agreements with interested parties who can fund, support, and/or manage sanctuaries. Monitor sanctuary performance through surveys.
	<ul style="list-style-type: none"> Increased number of fishers and fish farmers benefitting from being licensed in the industry. Improved monitoring, control and surveillance, education and enforcement. Increased compliance by fishers and fish farmers with The Fisheries Act, 2018. 	To increase percentage of fishers and fish farmers who are licensed, to 90% by 2027.	<ul style="list-style-type: none"> Conduct survey of vessels and fishers to determine number for baseline to be established. Promote and encourage the use of the Online Licence and Registration platform by stakeholders. Collaborate with other Ministries, Departments and Agencies (MDA) to ensure enforcement and conservation efforts. Conduct enforcement activities within and around our fisheries waters. Conduct communication campaigns around the benefits of being licensed. Improve the ease of obtaining licences, authorizations and permits in accordance with The Fisheries Act, 2018.
	<ul style="list-style-type: none"> Greater stewardship of the fisheries resources through implementation of management plans. Optimal utilisation of fishery resources 	To establish 6 additional management plans for capture fisheries and aquaculture by 2028.	<ul style="list-style-type: none"> Consultation with key stakeholders to inform development of species-specific management plans. Conduct Research and Surveys on target species to increase data and statistics for the development of management plans. Develop fishery management plans for offshore pelagic,

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
	<ul style="list-style-type: none"> Optimal revenue for key stakeholders 		<p>sea moss, and lobster.</p> <ul style="list-style-type: none"> Develop aquaculture management plans for tilapia, freshwater prawn and ornamental fish. Submit proposals to request funding from international entities for expansion of aquaculture and mariculture production, and management of capture fisheries. Collaborate with key stakeholders (e.g. AIC) to facilitate the optimum conditions for diversification and expansion of aquaculture
	<ul style="list-style-type: none"> New and underutilised fisheries developed Additional revenue streams created for key stakeholders Increased number of fish species cultured Increased amount of data and statistics relevant to the sector. 	To develop underutilised fisheries and diversify aquaculture production by 2030.	<ul style="list-style-type: none"> Conduct research on underutilised fish species to determine viability, ease of commercialisation and feasibility for profit. Encourage and facilitate pilot projects on targeted underdeveloped species by fishers and fish farmers. Provide technical assistance to fishers and fish farmers on mechanisms to maximise economic returns within the local and international market. Leverage international and regional agreements to access new markets for underutilised fisheries and aquaculture species (e.g. expansion of tilapia, mariculture (oysters), offshore pelagics fishing, freshwater prawn, ornamental fish). Increase enforcement activities to deter illegalities in the sector that will affect the development of fisheries and aquaculture.
Food and Nutritional Security	<ul style="list-style-type: none"> Increased aquaculture production Increased fish availability for local and export markets Improved aquaculture practices 	To triple fish production from Aquaculture to over 3400t by 2028.	<ul style="list-style-type: none"> Construction of new bio-secure Recirculating Aquaculture System (RAS) hatchery at the NFA's Aquaculture Division to increase fry production. Improve and produce additional broodstock to supply the demand of fry for fish farmers.

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
	<p>by fish farmers for a sustainable sector</p> <ul style="list-style-type: none"> Increased number of fish species cultured Increased number of aquaculture practitioners (aquaculture and mariculture production) Improved business management skills by fish farmers 		<ul style="list-style-type: none"> Import additional broodstock to supply the demand of fish farmers. Renovation of production and brood ponds at the Aquaculture Division. Expand the existing mariculture facility at Bowden to facilitate oyster and sea moss diversification Increase collaboration with key stakeholders such as NIC, DBJ and AIC to implement systems that will facilitate the optimum conditions for aquaculture production. Facilitate the development of oyster farms in other areas such as Savanna-La-Mar and Hanover. Capacity-Building for fish farmers to increase knowledge and skills in fish production.
Good Corporate and Fisheries Governance	<ul style="list-style-type: none"> Enhanced organisation efficiency and effectiveness in service delivery Improved image and perception of the Authority Improved quality of service and service delivery along the value chain for fishers and fish farmers. 	To obtain ISO:9001 certification to strengthen the Authority's development into a world class organisation by 2030	<ul style="list-style-type: none"> Conduct a thorough assessment and situational analysis of the organisation Develop and implement Standard Operating Procedures Continuous documentation and refinement of processes Implement a verified ISO:9001 quality management system.
	<ul style="list-style-type: none"> Trained technical staff in place Established corporate headquarters and port Upgraded, well-equipped and fully functional sub-offices Upgraded Research and Development (R&D) 	For the NFA to be equipped with the requisite resources and infrastructure to function effectively as a statutory body by 2028.	<ul style="list-style-type: none"> Fulfil financial obligations in accordance with the FAA, PBMA and The Fisheries Act, 2018 and applicable circulars. Implement ICT and IT Management systems. Identify and acquire a suitable location with adequate space to house the NFA staff. Hire competent staff in line with new organisational

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
	<p>infrastructure</p> <ul style="list-style-type: none"> Improved working conditions for staff 		<p>structure.</p> <ul style="list-style-type: none"> Develop a project plan for the modernisation of the Authority's infrastructure. Establish five regional NFA centres (Kingston, St. Elizabeth, St. James, St. Mary and Clarendon) Refurbish sub-offices and improve overall infrastructural capacity for the NFA. Acquire suitable type and number of vehicles to support operations and enforcement. Identify and acquire adequate equipment to support regulatory compliance and enforcement. Identify and acquire port facilities. Identify and acquire adequate infrastructure to support the Research and Development (R&D) capacity for the Authority's capture fisheries and aquaculture programmes.
	<ul style="list-style-type: none"> Key regulations are in place for fisheries and aquaculture Improved management and sustainability of the fisheries sector 	To strengthen the legislative framework by providing policy guidance for four key regulations to govern the fisheries and aquaculture sector by 2028.	<ul style="list-style-type: none"> Conduct internal and external consultations to inform the policy direction of the Regulations. Conduct internal and external consultations to inform drafting of provisions for Regulations. Provide drafting instructions for key regulations to be promulgated as law.
Climate Smart and Resilient Fisheries	<ul style="list-style-type: none"> Education of fishers and fish farmers on climate resilience practices for a sustainable sector Increased number of fishers and fish farmers who are aware of and utilizing climate-smart practices 	To introduce climate smart technologies and alternative livelihoods in fisheries by implementing 2 pilot programmes by 2027.	<ul style="list-style-type: none"> Implement Pilot project for introduction of offshore pelagic fishing through: <ul style="list-style-type: none"> Providing training on use of Fishery Aggregating Device (FAD) and long line technology Providing training on post-harvest handling techniques Develop management systems for FAD fishing Implement Pilot project to construct RAS hatchery and

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
	<ul style="list-style-type: none"> Increased knowledge of climate change and its impact, as well as mitigation and adaptation practices 		<p>farm to conserve water, as well as, train users on, and transfer RAS technology.</p>
Economic and Social Viability of the Fisheries Sector	<ul style="list-style-type: none"> Improved fishing practices for a sustainable sector Improved business management skills by fishers and fish farmers Improved profitability of fishers and fish farmers 	<p>To increase the fisheries contribution to the GDP to J\$35B, by 2027.</p>	<ul style="list-style-type: none"> Increase production from aquaculture by tripling the number of tonnes of fish produced annually. Develop underutilised fisheries and aquaculture through diversification of species and establishment of new markets. This will be through: <ul style="list-style-type: none"> expansion of tilapia to 3400t. increasing the number of mariculture farms by 50%. offshore pelagic fishing (double production to 3300t), freshwater prawn (redevelop the sector) , and determine baseline data for sea moss to develop the sector. Improve the collection of data at landing sites. Increase amount of data and statistics to improve reporting on the performance of the sector. Conduct economic analyses to account for the value-added contribution from the fisheries sector. Monitor and measure fish production through robust statistical sampling programme. Conduct Socio-economic surveys of fishers and fish farmers to inform baseline data. Develop the ornamental fish sector to capitalise on OIE disease free status to access major international markets. Institute development plans for new value-added products

STRATEGIC PRIORITIES	OUTCOMES	STRATEGIC OBJECTIVES	STRATEGIES
			<p>(e.g., smoked tilapia and oyster punch).</p> <ul style="list-style-type: none"> • Collaborate with industry stakeholders to implement and promote strategies to grow fisheries-based eco-tourism (e.g. increase the number of fishing tournaments, snorkelling in sanctuaries, recreational fishing). • Host events that recognise and highlight Fisheries and Aquaculture to attract investments. • Partner with Government (e.g. AIC and JAMPRO), NGOs and private sector to market the sector and attract investments. • Develop a project plan for the modernisation of fishing infrastructure and fishing beaches to benefit stakeholders.
	<ul style="list-style-type: none"> • Stakeholders trained in skills and technology solutions that will assist in their safety and benefit the fisheries sector. • Improved working conditions for fishers and fish farmers. • Increased knowledge and compliance with The Fisheries Act, 2018 and regulations • Structured organisations and representation for fisheries stakeholders (co-operatives/ associations). 	<p>To increase the percentage of fishers and fish farmers who are trained in fisheries and aquaculture management and production technologies by 2028.</p>	<ul style="list-style-type: none"> • Train extension officers on fisheries and aquaculture management (e.g. FAO training project). • Partner with local and international training institutes and universities to provide training for internal and external stakeholders. • Facilitate the establishment of fisher and aquaculture organisations through the Authority's extension services.

2.3 PROGRAMMES AND SUB-PROGRAMMES OF THE NFA

The National Fisheries Authority's functions fall under the Sub-Programme – Fisheries Development within the Ministry of Agriculture and Fisheries. As an agency, this is considered to be our main programme. All projects and initiatives to achieve the strategic objectives are controlled by four main sub-programmes of the Authority:

- **Direction and Administration (Budget Activity: 10005)**

Executive Direction and Management consists of the Office of the CEO, Corporate Services, Legal, Internal Audit, Commercial Services, Project Management and Finance and Accounts. Through the efficient operations of these key administrative functions, the NFA will be effective as an Authority that governs the fisheries waters of Jamaica.

- **Capture Fisheries Development (Budget Activity: 10181)**

The Capture Fisheries Sub-Programme of the NFA is tasked with the management of all capture fisheries in Jamaica through research and development, and implementing sound management practices. The activities of the Division are geared towards ensuring that the fisheries sector of Jamaica is sustainably managed for the current and future generations.

- **Aquaculture Development (Budget Activity: 10182)**

The Aquaculture Sub-Programme is responsible for increasing food security by regulating and overseeing aquaculture farms in Jamaica. Through its fry production, the Division is able to assist fish farmers with obtaining seedstock for their production and through its Extension Unit, expert advice is given to persons in the industry.

- **Regulatory Compliance (Budget Activity: 12310)**

The newly established Sub-Programme is assigned to the Division: Fisheries Compliance, Licensing and Statistics, which was established to ensure that the industry is compliant with the provisions of the Fisheries Act, 2018. This will be accomplished by improving the licensing and registration regime for stakeholders, strengthening the enforcement arm of the National Fisheries Authority (NFA) and ensuring that data are collected to inform the management strategies being undertaken by the NFA.

2.4 Vision of Success

Fisheries remains one of the major, internationally recognised sector that contributes to food security. As the world faces environmental issues, such as climate change, that will lead to a decrease in food production, the fisheries sector is positioned to address these gaps, particularly through the Aquaculture sub-sector.

The National Fisheries Authority is mandated by the Fisheries Act, 2018 to ensure that Jamaica's fisheries and aquaculture sectors are sustainably managed for now and future generations. The NFA creates public value by ensuring sustainable development and management of a fisheries resource valued at over J\$10B annually which employs over 40,000 individuals directly and indirectly; and contributes to the livelihoods of over 200,000 Jamaicans. The NFA's philosophy is anchored in its core values, which include integrity, transparency, accountability, fairness, professionalism and respect.

The success of the NFA in effectively performing its functions is the catalyst that will, in addition to food and nutritional security, lead to a sustainably managed fisheries and aquaculture sector which will contribute towards socio-economic growth. Through an efficient licensing process that ensures all players in the industry have an equal opportunity to access the registration services of the NFA, these players can be identified and benefit from opportunities that are afforded to them. Additionally, fishery and aquaculture management plans, coupled with increased sanctuary cover and effective enforcement, will satisfy the mandate of the Authority to manage our fisheries resources in a way that ensures sufficient fish stock for current and future generations. This is the vision of the sector that the NFA will help to bring to fruition.

3.0 SECTION C: SITUATIONAL ANALYSIS

3.1 Overview

Globally, fisheries and aquaculture production are an important source of accessible nutritious food, and a basis of livelihoods. It is also a key driver of coastal and rural economic well-being. However, overfishing, illegal fishing and the combined effects of ocean-based activities and climate change on resources and ecosystems put the sector at risk and undermine the resilience of those relying on it in many places. Improving fisheries and aquaculture management is crucial to ensure future generations continue to benefit from Ocean resources and ecosystem services. According to The State of World Fisheries and Aquaculture 2022 Report, an assessment by the Food and Agriculture Organization (FAO) indicated that the fraction of fishery stocks within biologically sustainable levels decreased to 64.6% in 2019 and if fishing practices are not carefully regulated, by 2050 the global fish stock will be unsustainable. The island of Jamaica, with a coastline of 1,022 km, 224,000 square kilometres of fisheries waters, 10 fishing banks and 184 fishing beaches, is dependent on a consistent supply of fish to ensure food and nutritional security. It is critical that our existing fisheries resources are carefully managed and that the potential for producing fish through aquaculture, is fully tapped into.

The structure of the fisheries sector of Jamaica is comprised of two sub-sectors – Capture Fisheries and Aquaculture. In 2022, Jamaica produced more than 9 thousand tonnes of fish (including sea cucumber and crustaceans), with a value of USD 116 million; 9% of this value came from aquaculture and 91% from fisheries (that is, the capture of finfish, lobster, conch etc.). Capture Fisheries primarily consists of artisanal fishers operating from open type canoe boats over inshore and offshore areas; the inshore fishery takes place in the coastal waters of the Island Shelf with its nine proximal banks (CFRAMP, 2000). The fishers operate from the fishing beaches primarily on the wide South Shelf of the island, as well as, along the banks of the Pedro and Morant Cays. A smaller but economically significant sub-sector is comprised of industrial fishers who fish for lobster and conch, the latter being a highly significant part of the industry from the 1960s. Commercial sports fishery (e.g., fishing tournaments) and small recreational fishery are other sub-sectors which, although smaller in scope, are likewise important. Aquaculture is the branch of fisheries which deals with farming of aquatic organisms, including fish, molluscs, crustaceans and aquatic plants (Lucas, 2019); and its importance globally has been further highlighted by the impact of climate change on the more traditional capture fisheries. Jamaica has a rich history in aquaculture from the introduction of the tilapia in the 1940s to the sector's peak in the 2000s when annual production was over 5,000 tonnes (mt).

The financial support available through the Fisheries Management and Development Fund (FMDF), which is funded by a levy on conch export (supported by the Conch (Export Levy) Act (2009)), as well as the NFA's affiliation with regional and international organisations, have assisted with managing and developing the fishing industry. Jamaica also has the enviable track record of being generally free of notifiable OIE (World Organisation for Animal Health) diseases in the Aquaculture Sector. This status is one which the NFA will seek to maintain through its programmes and initiatives.

The fisheries sector is also challenged by a lack of the following:

- dedicated low-cost financing for the sector,
- adequate infrastructure and facilities at International Standards for the sector,
- trust by key stakeholders (artisanal farmers),
- adequate Information Management and ICT systems, and
- adequate capacity of the NFA to address factors which negatively affect fishers.

However, the NFA continues to strengthen its capacity through opportunities presented for growth and development in aquaculture and capture fisheries. This will be accomplished through: developing new and under-utilised fisheries, expansion and diversification of aquaculture (including mariculture and ornamental fish farming), as well as seeking more opportunities for partnerships.

In addition, the fisheries sector is faced with the threat of habitat loss, beach erosion, rising sea levels and increased storm intensities as a result of climate change. Implementation of the 5-year project – Promoting Community Based Climate Resilience in the fisheries sector project (PCBCR), will continue in this financial year and through its focused activities, will implement adaptation strategies for climate change. There is also a need for the sector to be responsive to disasters, some of which are as a result of climate change, by ensuring that mitigation strategies are adequate. With Jamaica's fisheries waters also being threatened by the prolific *Sargassum* blooms, there is need for increased research and intervention via a multi-stakeholder approach with other government entities. Through the PCBCR project and increasing the level of research within the Authority, the responsiveness of the sector to environmental issues will be increased.

The sector is also threatened by Illegal, Unreported and Unregulated (IUU) fishing, destructive practices, and use of drugs, noxious and explosive substances in the fishing waters. A key strategy of the NFA for this financial year is to increase enforcement by expanding the human capacity of the Compliance Branch within the Authority and increasing collaboration with the security forces.

International funding through projects, continues to be an opportunity leveraged by the NFA to improve its systems, and an example of this is the Online Licensing and Registration System being developed through funding from the Inter-American Development Bank. The online platform will be launched in December 2023 and through this portal, fishers will be able to apply, and administrators will be able to process, and manage data related to licences, authorisations and permits.

Although there are several challenges for the sector, there are also existing strengths and numerous opportunities. The NFA through its revised strategic objectives, will seek to ensure that the fisheries resources of Jamaica are adequately conserved and managed in accordance with the Fisheries Act and international agreements and arrangements, for the benefit of all members of society.

3.2 SWOT ANALYSIS

Internal Environment:

STRENGTHS	WEAKNESSES
<ul style="list-style-type: none"> • Strong legislative and regulatory framework driven by The Fisheries Act, 2018 and other supporting legislation • Governance systems in place that allow for transparency and accountability • Zoning of management areas and management plans for fisheries are supported by legislation • Technically competent staff with specialised skills in fisheries and aquaculture management, as well as other key areas. • Technical services provided to fish farmers and fishers through the Authority's extension services. • Research and data are available to support evidence-based decision-making in the fisheries sector • International and regional agreements to support fisheries management, the Blue Justice Initiative and access to markets by stakeholders • Management plans are in place for high-income species such as Queen Conch and Sea Cucumber. • Cadre of trained enforcement officers in place • Online Licensing and Registration system in place • IT infrastructure and IT management systems in place • Clearly articulated strategic objectives and performance management systems in place • Staff is more receptive and involved in the new initiatives of the Authority • Audit functions established for the Authority • HR policies and procedures are established • Fish produce from aquaculture are notifiable OIE disease free • Solid relationship with security and law enforcement partners 	<ul style="list-style-type: none"> • Insufficient human capacity resources to support all functions of the Authority (e.g., IT human capacity). • Staff discomfort due to low classification and poor working conditions. • Inadequate communication with stakeholders • Inadequate marketing of the fisheries sector through public relations to our stakeholders and the general public. • Lack of institutional capacity, such as infrastructure (e.g., Corporate Headquarters, R&D infrastructure, pond spaces etc.) required to support the functions of the Authority. • Inadequate project management capabilities to support the projects, programmes and initiatives of the Authority. • Inadequate Regulations for the fisheries and aquaculture sector (e.g. Regulations are pending for key areas such as aquaculture) • No dedicated landing site for industrial fishers. • Insufficient Standard Operating Procedures for the Authority • Low administrative fees charged for services offered by the NFA

External Environment

OPPORTUNITIES	THREATS
<ul style="list-style-type: none"> • Global funding opportunities or initiatives aligned to the fisheries sector • Global increase in demand for fish and fish products due to dietary and health benefits of fish. • Growth in Aquaculture globally as an alternate strategy to satisfy an increased demand for fish and fish products. • Commercialisation of oysters and other food species for marketing in the tourism and recreational industry. • Ability to trademark products associated with the industry to increase earning potential for the sector. • Potential for growth for Aquaculture and Capture Fisheries through expansion of tilapia, mariculture and ornamental fish, as well as expansion of non-traditional species (e.g. tuna) • Fishery Tourism; ability to capitalise on the recreational activities associated with tourism to benefit the fishing industry (e.g., fishing tournaments, snorkelling in sanctuaries etc.). • Access to global markets due to our fish being relatively free of notifiable OIE (World Organisation for Animal Health) diseases. • Expansive fisheries waters for Jamaica, including the offshore banks, increase the opportunity for other markets to be explored. • Highest density of queen conch within the Caribbean region. • Unused government lands present an opportunity to expand fish farming • Existence of trade agreements that support regional and international trade within the sector 	<ul style="list-style-type: none"> • Fisheries sector considered as low priority and as such, budgetary and policy support are lacking at the national level to support initiatives. • Change in Ministerial initiatives impacting existing programmes of the Authority. • Financial support intended for the fisheries sector may be deflected to other government bodies due to overlapping mandates. • Lack of integrated planning and governance amongst Government agencies with responsibility for enforcement and the environment • Strong competition from housing and commercial developers resulting in displacement of fishers from fishing beaches and loss of land for aquaculture development. • Hazardous Waste Disposal site granted permission in the largest and most productive aquaculture production area. • Re-allocation of key fisheries infrastructure. Example, fisheries complex that was built to accommodate industrial vessels re-allocated for use as a car park. • Lack of jetty and related infrastructure threatens development, enforcement, investment and overall governance of the fisheries area (e.g., on the Pedro Banks). • Climate Change causing loss of habitat, beach erosion, drought, excessive <i>Sargassum</i> blooms, rising sea levels, increased storm intensities etc. • Cultural resistance to non-traditional species of fish (e.g. Tilapia and pelagics). • Illegal, Unreported and Unregulated (IUU) fishing in our fisheries waters • Behavioural and biological changes of species due to external factors • Trade barriers due to increased restrictions (tariff and non-tariff) to enter certain markets, as well as trade disruptions • Resistance from stakeholders to changes in initiatives, programmes and processes from the Authority (e.g., new licensing regime). • High cost of fuel and electricity.

3.3 TOWS ANALYSIS

<div>INTERNAL FACTORS</div> <div>EXTERNAL FACTORS</div>	STRENGTHS	WEAKNESSES
OPPORTUNITIES	<p>S-O Strategies</p> <ul style="list-style-type: none"> • Utilise the zoning of management areas and implementation of management plans to attract donor funding • Capitalise on OIE disease free status to access major international markets. • Effectively manage the licensing regime to facilitate fishers and fish farmers who are entering the sector. • Facilitate fisheries tourism by implementing recreational, non-destructive activities in fish sanctuaries (e.g. snorkelling). • Utilise effective management plans and enforcement for queen conch to sustain high densities. • Leverage international and regional agreements to access new markets for underutilised fisheries and aquaculture species (e.g. expansion of tilapia, mariculture, tuna). 	<p>W-O Strategies</p> <ul style="list-style-type: none"> • Implement effective communication strategy to educate stakeholders regarding on opportunities for trade and funding. • Increase public relations by the Authority to highlight opportunities for international trade, tourism, commercialisation of fish products and growth in the industry. • Garner global funding to support the Authority's institutional capacity (e.g. R&D infrastructure). • Acquire unused government lands to expand pond spaces for the Authority's aquaculture initiatives. • Lobby global funding to increase project management capabilities • Access international funding opportunities to establish a dedicated landing site for industrial fishers

THREATS	<p style="text-align: center;">S-T Strategies</p> <ul style="list-style-type: none"> • Leverage international and regional agreements to increase the profile of the NFA (e.g. Blue Justice Hub established in Jamaica). • Leverage the strong legislative and regulatory framework driven by The Fisheries Act, 2018 to garner financial support for the fisheries sector. • Train and dispatch compliance officers to carry out enforcement in the fisheries waters that will address illegalities, IUU fishing and fisheries crimes. • Implementation of a Communications Plan to clearly articulate the strategic objectives and initiatives of the NFA to stakeholders. • Increase training offered by technical staff to fishers and fish farmers regarding climate resilient technologies and practices. • Update management plans and management areas to address behavioural and biological changes in fish species. • Increase R&D activities to mitigate the environmental impacts of climate change. • Effectively educate stakeholders on the new Online Licensing and Registration System • Increase partnership with law enforcement and environmental agencies to monitor, control and conduct surveillance in the fisheries waters. 	<p style="text-align: center;">W-T Strategies</p> <ul style="list-style-type: none"> • Sign contracts with security agents of government to enforce the Fisheries Act on the Authority's behalf. • Request that JDF and JCF officers be seconded to assist with enforcement of the fisheries waters. • Engage staff to communicate new initiatives to stakeholders. • Utilize contacts in Press contacts to spread our message. • Outsource IT and technical services to carry out the work of the Authority.

3.4 PESTLE ANALYSIS

POLITICAL	<ul style="list-style-type: none"> • Frequent change in Minister with responsibility for Agriculture and Fisheries leading to a change in Minister's initiative. • Strong support from the political directorate of the parent ministry, for fisheries and aquaculture • Lengthy delays in confirming the appointment of Board Members • Change in Government Administration resulting from a General Election • Potential for unseemly involvement in the operations of the NFA (e.g. licensing regime, issuance of quotas, incentives for fishers and fish farmers) • At the national level, the GOJ's Policy directives do not prioritise the fisheries sector • Overlapping of mandates by governmental bodies (e.g., Blue Economy initiatives spread across different GOJ entities) • The Fisheries Advisory Council that provides policy advice to the Minister • Obligations to International Treaties and Agreements • Vision 2030 and the Medium-Term Socio-Economic Framework has established targets for the sector
ECONOMICAL	<ul style="list-style-type: none"> • Fluctuating inflation and exchange rates affecting the cost of operational inputs into the sector (e.g. fuel, vessels, electricity, feed, nets, engine) • Lack of dedicated low-cost financing for the sector resulting in low Return on Investment or minimal investment for key stakeholders. • Financial implications of world events on the sector (e.g. war, global logistics) • High capital cost for entry into the sector for fishers and fish farmers • Trade barriers (e.g. tariffs, quality standards, prices in the world market etc.) • Opportunities for trade (limited volume to meet the market demand, value-added products, trade agreements) • BOJ's Monetary/Financial Policy which impacts the interest rates for fish farmers and fishers to access loans. • Ministry of Finance's Macroeconomic Policy (e.g. change in concession guidelines, import duties) • Production Incentive Regime (scepticism and lack of awareness of the programme by some fishers and fish farmers) • Under-developed value chain for marketing of fish and fish products • Micro Small and Medium Enterprises (MSME) Policy which can be explored • Administrative fees charged for services offered by the NFA
SOCIAL	<ul style="list-style-type: none"> • Prevalence of larceny and poaching which impacts the aquaculture and capture fisheries sub-sectors • Weak organisation of fishers and fish farmers that will allow for increased access to opportunities (e.g. formation of associations or co-operatives) • Insufficient training to meet the demand for building the capacity of fishers and fish farmers (e.g., navigation, safety at sea, gear technology, limited knowledge of modern aquaculture production technologies, fisheries and aquaculture management) • Lack of access to critical knowledge and/or infrastructure for marginalised and vulnerable fishers and fish farmers

	<ul style="list-style-type: none"> • Lack of socio-economic opportunities for marginalised coastal communities • Limited knowledge of opportunities that are available to fishers and fish farmers (e.g., PIR, National Insurance Scheme, Sagicor Life Insurance). • Unlicensed fishers and fish farmers contributing to illegalities within the sector which impacts the sustainability of the sector • Lack of, or inadequate social infrastructure at landing sites • Lack of formal documentation to facilitate issuing of licences, authorizations and permits (e.g., birth certificate, identification card, banking, insurance, wills etc.) • Fisheries sector dominated by aging males • Resistance to change related to new technologies, Government initiatives and enforcement measures • Limited trust in the Authority and GOJ by key stakeholders • Illegal, Unreported and Unregulated fishing (IUU) by international poachers
TECHNOLOGICAL	<ul style="list-style-type: none"> • Technology exists that will improve operations in the sector (e.g. GPS, VHF) • ICT and IT management systems in place at the Authority • Impact of technology on the sustainability of our fisheries (e.g., destruction of corals and reefs and technology leading to overfishing) • Pace of adoption of modern technology for security, safety, monitoring and production in the fisheries and aquaculture sectors (e.g., RAS, use of drones, FAD.)
LEGAL	<ul style="list-style-type: none"> • The Fisheries Act, 2018 and attendant regulations providing the legal framework for regulating the industry • Bodies established by The Fisheries Act, 2018 – Board, Appeals Tribunal and Advisory Council. • New Regulations have been implemented (e.g. Conch Regulations of 2023) • Regulations are being updated or drafted (e.g., Fisheries Regulations, Fish Size, Fish Sanctuaries, Appeals Tribunal) • National Fisheries and Aquaculture Policy to be updated and promulgated • Policies to be drafted for the sector (e.g. Fish Size Policy, Inland Fishery Policy) • Frequent imposition of low fines for offences committed under The Fisheries Act, 2018 • Challenges to decisions of the Authority through the Appeals Tribunal • Potential for judicial review by Supreme Court that may impact the operations of the Authority • Sensitization of internal and external stakeholders on changes in the legal framework relating to the fisheries sector • Other legislation that support the fisheries sector (e.g. Wildlife Protection Act, Morant and Pedro Cays Act, Exclusive Economic Zone Act, Aquaculture Act etc.)

ENVIRONMENTAL

- Climate change leading to uncertainties, including flash floods, extreme drought, excessive *Sargassum* blooms etc., which impact fisheries and aquaculture production
- Non-sustainable fishing practices (overfishing, use of dynamites, harvesting undersized fish and berried lobsters) which affect the sector
- Introduction of noxious, deleterious or poisonous substances in the fisheries waters
- Pollution of the fisheries waters (e.g. through improper waste disposal)
- Genetic dilution of farmed fish which potentially leads to an inferior quality
- High rate of coastal development which impacts the fisheries habitat, as well as cost and availability of land for fisheries development
- Invasive species which displace our endemic species from their habitat
- Behavioural and biological changes of species due to external factors (e.g., smaller size, maturing earlier, migration etc.)
- Potential for eco-tourism (e.g., snorkelling in fish sanctuaries)

3.5 RISK ANALYSIS HEAT MAP (See Annex A for Risk Register)

		IMPACT				
		1	2	3	4	5
LIKELIHOOD	5					<ul style="list-style-type: none"> Lack of funding for programmes, policies, and initiatives for aquaculture Lack of operationalisation of the RAS hatchery in the agreed time frame Insufficient technical capacity and funding to manage and operate the RAS Negative impacts of climate change

3.7 STRATEGIC ISSUES AND CHALLENGES

	STRATEGIC ISSUES	CHALLENGES
1	Insufficient human, technological and infrastructural capacity of the NFA to fulfil its mandate.	<ul style="list-style-type: none"> • Inadequate budgetary support which affects the provision of adequate facilities. • Lack of trained fisheries and aquaculture students who can transition to the NFA due to insufficient number of programmes being available at the tertiary level or due to migration. • Low compensation for jobs in the Authority resulting in low staff retention and difficulty in attracting new staff
2	Access to capital funding for aquaculture and fisheries.	<ul style="list-style-type: none"> • Requirement for collateral to secure a loan for investing in aquaculture and fisheries • Lack of recognition of small-scale fishers by financial institutions • The Authority is challenged to attract funding from funding agencies to develop and implement • Simplistic approach to fisheries and aquaculture by investors who do not appreciate the importance of the sector. • Risk averse entrepreneurs
3	Illegal unreported and unregulated (IUU) fishing, and illegalities in the local fishing sector	<ul style="list-style-type: none"> • Foreign poachers encroaching on our territorial waters • Lack of public education and awareness of fisheries laws and regulations • Socio-economic conditions leading to illegalities • Inadequate enforcement of coastal and territorial waters. • Imposition of low fines pose no deterrent to illegalities
4	Impact of climate change on sustainability and profitability of fisheries and aquaculture	<ul style="list-style-type: none"> • Rising sea levels and increasing sea temperatures • Increase in storm intensity • Severe weather incidents, such as increase in windy conditions • Drought and flooding • Increasing vulnerability of Small Island Developing States • Loss of fishing beaches and coastal fish farms • Behavioural and biological changes of species (e.g. migration) • Loss of habitat and spawning areas for fish species
5	Over-exploitation of fisheries resources	<ul style="list-style-type: none"> • IUU fishing • Illegalities in the local fishing sector; e.g. fishing in close seasons and within sanctuaries • Destructive fishing practices leading to reduced fish populations • Inadequate ability to enforce the expansive fisheries waters due to insufficient resources

	STRATEGIC ISSUES	CHALLENGES
		<ul style="list-style-type: none"> • Quality and lack of diversity of fish • Loss of livelihoods due to low catch of fish • Increased coastal developments resulting in loss of habitats
6	Loss and degradation of fish habitat	<ul style="list-style-type: none"> • Impacts of climate change causes intrinsic changes in fish habitats • Humans encroaching on fish habitats through increased development • IUU fishing and unsustainable fishing practices • Pollution, including improper waste disposal, within the fisheries waters and related environments • Toxic and general waste run off into the fisheries waters. • Ineffective and inadequate enforcement of environmental laws.
7	Inadequate management of fisheries and aquaculture resources	<ul style="list-style-type: none"> • Disorganisation within the sector (e.g., lack of effective associations and co-operatives) • Open entry to the fisheries which can lead to overfishing and unsustainable fishing practices • Insufficient management plans due to lack of institutional capacity to conduct research and develop such plans • IUU fishing which negatively impacts the sustainable management of fisheries resources • Access to and availability of water to sustain aquaculture • User conflict and competition for resources (e.g., reclassifying aquaculture lands for housing, waste plant built next to Aquaculture farm, fishing beaches being displaced by development activities) • Insufficient technical capacity to carry out the functions needed for managing the resources. • Insufficient support infrastructure for the further development of aquaculture (e.g., hatcheries, feed mills etc.)
8	Insufficient Research and Development (R&D) infrastructural capacity	<ul style="list-style-type: none"> • Lack of R&D infrastructure for capture fisheries and aquaculture. • Lack of interest at the tertiary level to carry out R&D studies in fisheries and aquaculture technologies • Lack of funding to conduct R&D studies
9	Insufficient policies and standard operating procedures for the NFA.	<ul style="list-style-type: none"> • Inadequate institutional capacity • Inadequate reporting, accountability and monitoring systems • Inadequate audits of operations and performance. • Insufficient funding for the work associated with policy development (e.g. consultancies and

	STRATEGIC ISSUES	CHALLENGES
		<ul style="list-style-type: none"> research) Inadequate leveraging of data and information for the sector
10	Diminishing availability of land for fisheries and aquaculture	<ul style="list-style-type: none"> Limits the potential for expansion of the sector High capital expense to access land due to competition Existing fish farmers lured out of the business by developers seeking to re-purpose aquaculture lands
11	Lack of Stakeholder Buy-In	<ul style="list-style-type: none"> Resistance by stakeholders to new initiatives which disrupt familiar practices Low compliance with fisheries laws High cost of PR affects communication with stakeholders
12	Inadequate public education for issues in fisheries and aquaculture	<ul style="list-style-type: none"> Inadequate budgetary support for Public Education campaigns Lack of human capacity to reach the extent of the demographic of fishers and fish farmers.

3.8 CONCLUSION FROM STRATEGIC ANALYSIS

The National Fisheries Authority plays a critical role in the management and development of fisheries and aquaculture in Jamaica, where the socio-economic benefits of the fisheries sector have been long recognised. The situational analysis highlighted however, a decrease in aquaculture production, non-compliance with licensing requirements by fishers and the unavoidable impacts of climate change. The prevailing strengths and weaknesses of the internal environment were highlighted to be, inter alia, a strong legislative process for the sector and the technical competence of the staff but there are issues with overall lack of institutional capacity, insufficient budgetary support and inadequate communication to stakeholders. Many opportunities present themselves in the external environment where there is an increasing demand for fish and fish products which can be supplied by aquaculture, as well as global opportunities for trade and fishery tourism. However, the threats facing the sector cannot be disregarded, where change in ministerial initiatives, low consideration of fisheries as a priority, Illegal, Unreported and Unregulated (IUU) fishing and climate change, are some of the matters that can negatively affect the sector in a significant way.

The strategic analysis identified a number of strategic issues and the challenges presented by them. All are equally important, and the challenges raised can negatively impact the work of the NFA, if these are not addressed. The institutional capacity of the new Authority is an issue linked to inadequate funding and lack of trained personnel to transition into the NFA, while the global issue of IUU brings numerous challenges to the sector. At the heart of the issues is the need for adequate management of our fisheries resources, increased R&D and improvement in the operating procedures of the NFA.

4.0 STRATEGY IMPLEMENTATION

Ministry of Agriculture and Fisheries Sub-Programme: Fisheries Development		
Sub-Programme Objective: To increase fisheries contribution, to the GDP to J\$35B, through sustainable management and development of the fisheries and aquaculture sectors for the socio-economic benefit of all Jamaicans, by 2027.	Sub-Programme Description and Context: This sub-programme is responsible for the regulation, protection, management and enhancement of Jamaica's fishery resources. It is mandated by The Fisheries Act, 2018. This programme encompasses the work of the National Fisheries Authority to support the livelihoods of fishers and fish farmers and their contribution to the Jamaican economy. Regulatory, Monitoring, Research, Development, Conservation and Extension services promote sustainability of Jamaica's fisheries resources and the growth of aquaculture. This sub-programme will implement initiatives geared towards food and nutritional security (#GrowSmartEatSmart Strategy) such as Development of New and Underutilized fisheries and implementing an efficient licensing process to allow for easy access into the sector. Similarly, the sub-programme will implement Sustainable Fisheries and Aquaculture Management Plans that will incorporate Climate Smart and Resilient practices which will improve livelihoods. (#GrowSmartEatSmart Strategy).	
	Programme Budget:	
GOJ MEDIUM-TERM STRATEGIC PRIORITY: Inclusive Sustainable Economic Growth and Job Creation	Contribution to GOJ Medium-Term Strategic Priority: The fisheries and aquaculture sector provides jobs for all persons along the value chain from artisanal fishers and fish farmers to wholesalers and retailers. The sustainable management and diversification of our fisheries to ensure there is sufficient stock and the growth of the aquaculture industry to meet the growing demand for fish, are key areas through which economic growth will be achieved.	
VISION 2030 NATIONAL GOAL: <i>GOAL 3: Jamaica's Economy is Prosperous</i>	National Outcome #12 – Internationally Competitive Industry Structures - Agriculture Sector Outcome: Enabling environment for agriculture research and development	National Strategies: <ul style="list-style-type: none"> • Develop company sophistication and productivity • Develop economic linkages and clusters • Develop economies of scale and scope through collaboration among enterprises in the region • Enhance the framework for competition among enterprises • Promote eco-efficiency and the green economy

NFA Sub-Programme: DIRECTION AND ADMINISTRATION	
Strategic Objectives: <ul style="list-style-type: none"> • To increase the fisheries contribution to the GDP to J\$35B by 2027 • To obtain ISO:9001 certification to strengthen the Authority's transition into a world class organisation by 2030 • For the NFA to be equipped with the requisite resources and infrastructure for full transition to a statutory body by 2028. • To strengthen the legislative framework by passing five key regulations to govern the fisheries and aquaculture sector by 2028. • To strengthen the Fisheries Act of 2018 to include climate smart and resilient fisheries clauses by 2030. 	Description & Context: Direction and Administration consists of the Office of the CEO, Corporate Services, Legal, Internal Audit and Finance and Accounts. Through the efficient operations of these key administrative functions, the NFA will complete its transition to an Authority that effectively governs the fisheries waters of Jamaica.
	Budget: 485.8M
NFA Strategic Priority: <ul style="list-style-type: none"> • Good Corporate and Fisheries Governance 	
Short and Medium-Term Outcomes: <ul style="list-style-type: none"> • Increased knowledge and compliance with the Fisheries Act and regulations • Enhanced organisation efficiency and effectiveness in service delivery • Improved image and perception of the Authority • Structured organisations and representation for fisheries stakeholders 	

OUTCOMES:	<ul style="list-style-type: none"> • <i>Improved fishing practices for a sustainable sector</i> • <i>Improved business management skills by fishers and fish farmers</i> • <i>Improved profitability of fishers and fish farmers</i>

NFA Sub-Programme: AQUACULTURE	
Strategic Objectives: <ul style="list-style-type: none"> • To triple fish production from Aquaculture to over 3400Mt by 2028. • To establish 8 management plans for capture fisheries and aquaculture by 2028. • To develop underutilised fisheries and diversify aquaculture production by 2030. • To introduce climate smart technologies and alternative livelihoods in fisheries by implementing 2 pilot programmes by 2027. • To increase the fisheries contribution to the GDP, to J\$35B by 2027. • To increase the percentage of fishers and fish farmers who are trained in fisheries and aquaculture management and production technologies by 2028. • To increase percentage of fishers and fish farmers who are licensed, to 90% by 2027. 	Description & Context: The Aquaculture Sub-Programme is responsible for increasing food security by regulating and overseeing aquaculture farms in Jamaica. Through its fry production, the Division is able to assist fish farmers with obtaining seedstock for their production and through its Extension Unit, expert advice is given to persons in the industry.
	Budget: 184.6M
NFA Strategic Priorities: <ul style="list-style-type: none"> • Sustainable Fisheries and Aquaculture Management and Development in accordance with local and international obligations and best practices. • Food and Nutritional Security • Climate Smart and Resilient Fisheries • Economic and Social Viability of the Fisheries Sector 	
Short and Medium-Term Outcomes: <ul style="list-style-type: none"> • Improved fish farming practices for a sustainable sector • Improved working conditions for fish farmers. • Increased aquaculture production that produces more freshwater fish • Improved aquaculture practices for a sustainable sector • Improved business management skills by fish farmers • Increased number of fish species cultured • Improved quality of service and service delivery along the value chain • Increased knowledge of best business practices by stakeholders in the fishery sector • Improved profitability of fish farmers 	

OUTCOME:	<ul style="list-style-type: none"> <i>Greater stewardship of the fisheries resources through implementation of management plans.</i>

ANNEX

ANNEX A: RISK REGISTER

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
To increase the area of sanctuary cover of our coastal fisheries waters to 20,000 hectares by 2027.									
Inadequate institutional capacity to identify the proposed new areas of sanctuary and carry out the technical work required within the agreed time frame.	Sanctuary cover is necessary for the conservation of species and the inability to declare sanctuaries will negatively impact biodiversity and food security.	Financial Institutional	2	4	8	Minimise	<ul style="list-style-type: none"> Identify management partners Increase technical capacity through training and development 	% decrease in human capacity to manage sanctuaries	Capture Fisheries
Inadequate Stakeholder Buy-In due to the possibility of negative impact on fisher's	Restricted access to the sanctuary will deny earning possibilities which could cause resistance from	Social	4	2	8	Minimise	<ul style="list-style-type: none"> Increase communication with fishing communities Increase public education 	% increase in complaints received regarding fish sanctuaries	Capture Fisheries Corporate Services

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
livelihoods	the fisherfolk								
Low interest in managing the sanctuaries	The Authority is unable to manage sanctuaries directly due to lack of capacity, so partnerships are needed to manage and carry out the daily functions of sanctuaries.	Institutional	3	4	12	Minimise	<ul style="list-style-type: none"> • Increase communication with fishers and potential partners • Increase public education 	# of partnerships formed	Capture Fisheries Corporate Services Legal Services
Inadequate funding for management of sanctuaries	Finances are required to manage the day to day operations of the sanctuary as well as, staff costs.	Financial	4	4	16	Minimise	<ul style="list-style-type: none"> • Engage funding sources • Facilitate Business Development opportunities 	% decrease in sanctuary operational activities % decrease in staff capacity	Capture Fisheries Corporate Services

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Timeliness in approval of sanctuary regulations due to legislative processes	As a statutory body, the Authority is unable to directly pass regulations and requires the support of its parent ministry and the Parliamentary Counsel to approve legislation. Delays in such approvals will impact the ability to meet the objective.	Legal	3	5	15	Minimise	<ul style="list-style-type: none"> • Build relationships • Clearly indicate the intent of the regulations so drafters can be fully appreciative of what is required. • Increase follow-ups • Timely review of correspondences from central ministry 	% increase in time taken to approve the regulations for a sanctuary	Legal Services Unit
To increase percentage of fishers and fish farmers who are licensed, to 90% by 2027.									
Unwillingness of stakeholders to become licensed due to cultural resistance and	Stakeholders who traditionally were accustomed to fishing, may feel that the licensing	Social	4	4	16	Minimise	<ul style="list-style-type: none"> • Increase efficiency in licensing process • Increase public education 	% decrease in licensed fishers and fish farmers	Licensing and Registration Unit

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
ignorance of the law	process is onerous and so are unwilling to adapt.								Extension Services Compliance Corporate Services
Insufficient human and financial resources to carry out public awareness	Finances and personnel are needed to carry out to engage with fishers and fish farmers	Institutional Financial	4	4	16	Minimise	<ul style="list-style-type: none"> • Increase presence in spaces where fishers and fish farmers are located. • Increase number of townhall meetings • Make budgetary justification for additional funding 	% decrease in licensed fishers and fish farmers	Licencing and Registration Unit Extension Services Corporate Services Finance & Accounts

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Inadequate enforcement due to insufficient resources	Enforcement is required to ensure that fisheries laws are followed; however, inadequate human and infrastructural resources will hamper such initiatives.	Institutional	4	4	16	Minimise	<ul style="list-style-type: none"> • Increase recruitment of compliance officers • Improve mobility of compliance officers • Increase technical capacity to carry out enforcement • Increase collaboration with law enforcement 	% decrease in licensing renewal rate	Compliance Branch Extension Services Licensing and Registration Unit
Untimely implementation of the online licensing and registration system	Late delivery of the online system will jeopardise plans to increase efficiency in the licensing process	Institutional	2	5	10	Minimise	<ul style="list-style-type: none"> • Effectively monitor the project deliverables 	% implementation of IrieFINS	Project Manager
Social resistance to using online system for licensing	Fishers and fish farmers may be reluctant to transition from the manual	Social	3	3	9	Minimise	<ul style="list-style-type: none"> • Effective training and communication • Effective Change Management Plan 	# of applicants utilising IrieFINS	FCLS Aquaculture

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
	system to which they are accustomed.								Capture Fisheries Corporate Services
Inadequate ICT infrastructure and internet reliability to facilitate online licensing of fishers and fish farmers	With the online system, there will be need for a reliable data connection, as well as ICT infrastructure for users of the system.	Institutional	3	3	9	Minimise	<ul style="list-style-type: none"> • Install computers/laptops at NFA stations for fishers to use for licensing 	% decrease in users of the online system	Extension Services Licensing and Registration Unit
Inadequate measures to identify and protect against cybersecurity threats	With an online-based system, there is a high risk of cyber attacks that may cause loss of data and impact licensing processes.	Legal Institutional Financial	4	5	20	Minimise	<ul style="list-style-type: none"> • Engage with the Cyber Incident Response Team (CIRT) • ICT Backup and Security Systems kept up to date • Enforce NFA's ICT Policy 	# of cyber attacks	ICT Unit

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
To establish 6 additional management plans for capture fisheries and aquaculture by 2028.									
Insufficient institutional capacity and technical staff to carry out the requisite research needed to develop management plans	Lack of resources and technical ability by staff to perform research activities and develop necessary management plans (e.g. staff, research vessel)	Institutional Financial	3	4	12	Minimise	<ul style="list-style-type: none"> • Increase technical capacity of staff through training • Increase funding opportunities 	# of management plans developed	Capture Fisheries
Timely capacity building for technical staff to increase competence in developing management plans	Delays in offering training opportunities to build capacity will delay the development of management plans	Institutional	3	4	12	Minimise	<ul style="list-style-type: none"> • Improve efficiency in managing training and development 	# of management plans developed	Capture Fisheries

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Lack of Stakeholder Buy-In	Insufficient information communicated to users of the resources.	Institutional	3	4	12	Minimise	<ul style="list-style-type: none"> • Increase communication with stakeholders • Increase public education 	Number of fisheries being managed through management plans	Capture Fisheries
To triple fish production from Aquaculture to over 3400Mt by 2028.									
Lack of funding for programmes, policies and initiatives	Sufficient funding is required to ensure that initiatives are implemented and outcomes are achieved.	Financial	5	5	25	Minimise	Develop strategic plan for aquaculture with targeted programmes identified, sensitise relevant stakeholders on the programme and its importance in achieving national goals e.g. Vision 2030	% increase or decrease in budget over previous year	NFA
Poor Performance of broodstock	Poor performance (Low fry production) of broodstock will cause the NFA to miss its	Institutional	4	5	20	Minimise	Rebuild and manage broodstock programme, import high performing broodstock	% decrease in quantity and quality of advanced fry produced monthly.	Aquaculture Division

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/Mitigation	Key Risk Indicator (KRI)	Risk Owner
	production target for 2027.								
Disruptions in supply chain for fish feed	Consistency in the supply of fish feed is required in order to ensure that production targets are met.	Institutional	3	5	15	Minimise	Maintain communication with fish feed suppliers	% increase in complaints from fish farmers about the availability of fish feed; Poor growth rates	NFA/Fish Feed suppliers
Non-renewal of the CET on imported floating fish feed	The removal of the CET on fish feed creates an opportunity for farmers to access high quality imported fish feed.	Institutional	3	4	12	Minimise	Maintain communication with the various Ministries (Agriculture, Industry, Finance) to ensure the timely approval and submission of the request for a waiver on the CET.	Unfavourable response from the responsible Ministries e.g. Ministry of Finance	NFA, PS Office

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Lack of operationalisation of the RAS hatchery in the agreed time frame.	The non-operationalisation of the RAS hatchery will result in the NFA not achieving its production target for 2025.	Financial and Institutional	5	5	25	Minimise	Maintain effective communication with partners to ensure timely approval of required permits and the release of funds	Lapse in timeframe for approval of permits and procurement of Contractors	NFA, PIU, PMCD and PS Office.
Insufficient technical capacity and funding to manage and operate the Recirculating Aquaculture System (RAS) hatchery	The lack of training and funds to operationalise the RAS hatchery will delay the operationalisation of the hatchery and lengthen the learning curve causing it not to operate at optimum efficiency.	Financial and Institutional	5	5	25	Minimise	Realignment of timeframes and funds to accommodate training of NFA staff to operate the RAS hatchery.	Redirection of funds to other activities	NFA. PIU, World Bank

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Insufficient infrastructure and capacity by the farmers to absorb fry production	The lack of expansion in aquaculture infrastructure (ponds, water, financing etc.) will not create the demand for the increase in seed stock production.	Financial	3	5	15	Minimise	Work with partners to improve the investment and market environment to ensure that it can absorb the increase in tilapia production.	No increase in investment in pond and other aquaculture infrastructure	NFA, Aquaculture Division
Lack of a market to support the output	The lack of a market to support the output will result in a glut and the inability of farmers to sell the tilapia.		3	5	15	Minimise	Increase marketing and promotion efforts through the development of extension programmes which target marketing, establishing marketing linkages and developing and implementing promotional activities.	% increase in time fish are kept in ponds by farmers after reaching harvest stage.	Aquaculture Division
Unavailability of productive inputs	The unavailability of productive	Institutional	3	5	15	Minimise	Increase communication with partners,	% increase in complaints	Aquaculture Division

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/Mitigation	Key Risk Indicator (KRI)	Risk Owner
	inputs (e.g. feed, hormones, water) will result in longer production cycles and reduction in production targets . feed, hormones, water)							from fish farmers	
To obtain ISO:9001 certification to strengthen the Authority's transition into a world class organisation by 2030.									
Insufficient institutional capacity to document operating standards for the Authority	The preparation of SOPs by managers along with other work pressures will create resistance to the process. This will delay the implementation of the standard.	Institutional	4	3	12	Minimise	1. Consistently remind managers about the need. 2. Provide templates to ease process 3. Offer incentives for the development of SOPs	% increase in development of SOPs.	Corporate Services

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Inability to attract and retain competent staff	Low compensation has made it difficult to attract and retain competent staff.	Institutional	4	4	16	Minimise	1. Complete Organisational review for presentation to Ministry of Finance	Approval of proposed adjustments to JDs.	
Inadequate institutional capacity to support the transition to a world class organisation	Inadequate HR, ICT, Accounts and administrative functions will prevent the organisation from performing at the optimum levels required to be world class.	Institutional	3	3	9	Minimise	1.Complete recruitment of relevant staff; 2.Accelerate the establishment of SOPs 3. Lobby for funds to build out ICT infrastructure 4. Lobby for funds to establish proper HQ.	% decrease in performance levels	
Low Buy-In from leadership and staff for implementation of ISO:9001 standard	The adoption of ISO 9001 disciplines will demand increased levels of efficiency as conformance to standard operating procedures become the norm.	Institutional Social	3	4	12		1.—————Improved communication about the benefits 2. Offer incentives for outstanding performance.	% increase in efficiencies	Corporate Services

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Lack of budgetary support to implement the programmes and initiatives of the Authority.	Lack of funds will slow/prevent the timely implementation of programmes and initiatives thus stymying the organisation's ability to excel.	Institutional	4	4	16	minimise	1. Seek to identify donor/partnership funds for key initiatives. 2. Lobby central government for support		Executive Office Programme Heads
For the NFA to be equipped with the requisite resources and infrastructure to function effectively as a statutory body by 2028.									
Timeliness of approval of processes by the parent ministry, that are needed to facilitate full transition	For the NFA to be considered fully transitioned, there are key processes that must be addressed and will require support of the ministry with granting the requisite approvals	Regulatory	4	5	20	Minimise	Increase communication with central ministry	% completion of approval processes	All Divisional Heads

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Lack of documented standards for the processes of the Authority	The absence of standard operating procedures and documented processes will negatively impact the operations of the Authority	Institutional	3	4	12	Minimise	Provide training for staff on standards and documentation	# of Standard Operating Procedures outstanding	Internal Audit Heads of Division
Lack of implementation and compliance with the Quality System needed to facilitate the transition	Failure to implement an ISO quality system will negatively impact the Authority's operations	Institutional	2	3	6	Minimise	Increase staff engagement and solicit buy-in	% completion of implementation of a quality system	Corporate Services Heads of Division
Insufficient budgetary support to obtain required resources.	Budgetary Support is needed for the Authority to obtain resources to carry out the work	Financial	3	5	15	Minimise	Solicit additional support from the parent ministry and Ministry of Finance	% decrease in budgetary funding	Heads of Division

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
High attrition rate and inability to attract staff due to low compensation of staff	The technical functions of the NFA require that the necessary human capacity be in place. Failure to retain and/or attract staff will impede the progress of meeting the Authority's objectives.	Financial Institutional	4	5	20	Minimise	Review organisational structure Make submissions to the Ministry of Finance regarding compensation	% increase in staff resignations	
Lack of commitment from internal and external stakeholders	The objectives of the Authority are enabled by the commitment of stakeholders and failure to obtain such can delay programme implementation	Institutional	3	2	6	Minimise	Increase stakeholder consultations Increase public relations	# of complaints received from stakeholders	Heads of Divisions

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
To introduce climate smart technologies and alternative livelihoods in fisheries by implementing 2 pilot programmes by 2027.									
Lack of funding to complete projects	With inflation the timely completion of projects is important as funding may be limited which affects the final outcome and completion of project.	Financial	3	4	12	Minimise	<ul style="list-style-type: none"> Source additional funding 	% completion of project	Capture Fisheries
Inadequate technical capacity of staff members	With the introduction of new technologies, staff members need to be trained and competent in order to assist the Stakeholders in the implementation and use of these	Institutional Financial	2	5	10	Mitigate	<ul style="list-style-type: none"> Increase technical capacity through training of staff Improve technical competence and expertise of stakeholders 	# of technical staff members trained	Capture Fisheries

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
	technologies								
Challenges with procurement of experts to conduct training	Insufficient funds available to attract and retain consultants proficient in training participants	Financial	3	4	12	Minimise	<ul style="list-style-type: none"> • Make budgetary justifications for additional funding • Adjust terms of reference to attract qualified persons 	Number of qualified applicants received for consultancy	Capture Fisheries
Reluctance by key stakeholders to embrace new technologies.	Larger vessels are needed with additional gear for the proper execution of the activity which will require more funds. These gear will also require extra maintenance for	Financial Institutional Social	3	5	15	Minimise	<ul style="list-style-type: none"> • Increase knowledge of climate smart technologies and their benefits to stakeholders • Gradual introduction of programmes 	# of Fishers embracing new technologies	Capture Fisheries

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
	longevity. The Fishers also need to work in groups in order to maximise returns on their investment.								
Negative impacts of climate change	Species migration, excessive <i>Sargassum</i> blooms and adverse weather conditions are some of the factors related to climate change that will negatively impact the fisheries sector	Environmental	5	5	25	Minimise	<ul style="list-style-type: none"> • Increase training on climate-resilient practices for the fisheries sector • Include climate change adaptation in the development of policy and management plan 	% decrease in the use of climate smart practices	Capture Fisheries

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
Inadequate project plan to support the intended pilot programmes	Poor site selection without input of Fishers	Financial	3	4	12	Minimise	<ul style="list-style-type: none"> • More town hall meetings and consultations with Fishers • Use of Indigenous / Local knowledge for site selection 	# of town hall meetings convened	Capture Fisheries
Poor execution of the project plan	Timelines to meet project objectives not met which affects costs	Financial	2	4	8	Minimise	<ul style="list-style-type: none"> • Improve reporting structure for more efficient and timely execution of project 	# of projects properly implemented and completed	Capture Fisheries
To strengthen the legislative framework by providing policy guidance for four key regulations to govern the fisheries and aquaculture sector by 2028.									
Timeliness of drafting and approval of regulations	When there are undue delays in enacting legislation to support the operations of the Authority, there will be prolonged periods of not being able to	Legal Social	3	5	15	Minimise	<ul style="list-style-type: none"> • Increase follow-ups w/ parent ministry • Build relationships w/ internal partners • Improve the time it takes to provide further drafting instructions 	% of amended Regulations	Legal

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
	effectively manage or supervise the industry that the Authority serves.								
Inability to attract and retain competent staff	Low compensation deters suitable staff from either accepting an offer or remaining in the position.	Financial	3	4	12				Legal Corporate Services
Lack of Buy-In from external stakeholders	Proposed changes to the regulations may face resistance from fisherfolk because of their familiarity with the old regulations or their previous manner of conducting	Social	3	2	6	Minimise	Increase communication with fishing communities Increase public education	% increase in complaints received regarding the provisions of regulations	Legal PR

Risk	Risk Description	Risk Category	Likelihood (P)	Impact (I)	Risk Score	Response Category	Response/ Mitigation	Key Risk Indicator (KRI)	Risk Owner
	business. This may reduce compliance and willingness to be sensitised.								
Inadequate budgetary support for the consultation process	In ensuring that proposed legislative changes capture the best interests of both the environment and the individuals that operate within the sector, it is important that consultation sessions are conducted. These consultation sessions will assist in the balancing the	Legal Social	4	4	16	Minimise		% monetary increase in the amount allocated to consultations % increase in the amount of consultations conducted	Legal Accounts

ANNEX C: LOGIC MODEL

ASSUMPTIONS: It is assumed that stakeholders will be interested in collaborating, that scientists/students will want to conduct research and that funds are available or be made available for all activities. Additionally, that the technical and human capacity will remain with the Authority.

CONSTRAINTS: The impact of climate change is a constraint for the sector. Also, rising cost of inputs for capture fisheries and aquaculture, as well as, resistance to licensing and registration processes by stakeholders.

Motor vehicles		2 bikes, 3 pickups, 1 tractor		\$37,000,000	Restricted bidding					

ANNEX G: DATA DICTIONARY FOR STRATEGIC OBJECTIVES

Strategic Objective: To increase the area of sanctuary cover of our coastal fisheries waters to 20,000 hectares by 2026			
Output/Outcome: Sanctuary cover of Jamaica's coastal waters increased to 20,000 hectares.			
Indicator/Measure: Area (hectares) of coastal fisheries designated as sanctuaries			
Lead/Lag: Lagging	Frequency of Measurement: Annually	Unit Type: Percentage	Direction: Higher is better

Formula: Coastal area covered by sanctuary in hectares	
Data Source: Successful audits and surveys of marine coastal areas	
Data Quality: Based on the definition of 'coastal area' being waters down to 30 metres (m) in depth, sound research and data collection techniques to ensure accuracy and reliability.	Data Collector: Principal Director of Capture Fisheries

Baseline: 10,000 (2021)	Target: 20,000 by 2026
Target Rationale: An increase in the areas conserved as no-fishing zones will allow greater potential for increase in fish population. Through "the spill over effect" fish numbers and biomass will increase in the surrounding areas for fishery productivity.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Sign MOUs with interested parties who can fund, support and manage the sanctuaries. 2. Consultation and Research Surveys to determine suitable sites and to monitor sanctuary performance. 3. Prepare boundary descriptions for regulations.

Strategic Objective: To increase percentage of fishers and fish farmers who are licensed, to 90% by 2027.			
Output/Outcome: Increased compliance by fishers and fish farmers with The Fisheries Act, 2018.			
Indicator/Measure: % increase in number of fishers and fish farmers licensed			
Lead/Lag: Lagging	Frequency of Measurement: Annual	Unit Type: Percentage	Direction: Higher is better

Formula: The number of licensed fishers and fish farmers divided by the number of persons fishing and farming fish in the island x100.	
Data Source: The number of persons fishing and farming fish will be informed by licensing and registration data, survey data of vessels, fishers and fish farmers.	
Data Quality: Sound research techniques employed to ensure survey results are able to withstand academic scrutiny.	Data Collectors: Principal Director, Fisheries Compliance, Licensing and Statistics Principal Director, Capture Fisheries Principal Director, Aquaculture

Baseline: 10% (2018/2019)	Target: 90% by 2027
Target Rationale: The Fisheries Act, 2018 has strengthened the legislative framework that supports the fishing industry and has transitioned the NFA into a statutory body. Through increased enforcement activities driven by a fully staffed Compliance branch and improved relations with the security forces, revenue collection is optimised and behaviours among the population improved. Increased staff complement and improved licensing processes will also lead to increased efficiency as it related to granting licences.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Increase and maintain staff complement for the Licensing, Compliance and Fisheries Extension branches of the NFA 2. Online Licence and Registration Database project funded by the IDB is to be completed by Dec. 2023 3. Increased enforcement within and around the fisheries waters. 4. Conduct surveys of vessels and fishers 5. Increase engagement with fish farmers.

Strategic Objective: To establish 6 additional management plans for capture fisheries and aquaculture by 2028.			
Output/Outcome: Greater stewardship of the fisheries resources through implementation of management plans.			
Indicator/Measure: # of approved management plans			
Lead/Lag: Leading	Frequency of Measurement: Annually	Unit Type: Number	Direction: Higher is better

Formula: Number of management plans granted approval, are counted.	
Data Source: Capture Fisheries and Aquaculture Divisions	
Data Quality: Sound fishery and aquaculture planning in accordance with the Fisheries Act, 2018 and established international standards	Data Collector: Principal Director, Aquaculture Principal Director, Capture Fisheries

Baseline: 2 (2021)	Target: 10 by 2027
Target Rationale: The existence of this number of plans means that focussed attention has been given to the: <ol style="list-style-type: none"> 1. management of existing fisheries, 2. development of new and underutilised fisheries in accordance with sustainability criteria, and 3. responsible development of aquaculture. This will result in new and sustainable blue economic growth for the betterment of the country.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Offshore Pelagic development 2. Lobster Fishery Survey 3. Sea moss development 4. Oyster culture development 5. Further development of the sea cucumber management plan 6. Development of Tilapia 7. Development of freshwater prawn 8. Development of ornamental fish

Strategic Objective: To triple fish production from Aquaculture to over 3500Mt by 2027.			
Output/Outcome: Increased aquaculture production that produces more freshwater fish			
Indicator/Measure: # of fish produced (metric tonne)			
Lead/Lag: Lagging	Frequency of Measurement: Annually	Unit Type: Number	Direction: Higher is better

Formula: Number of metric tonnes of fish produced by fish farmers	
Data Source: Data from Farm Management and Production	
Data Quality: Through monitoring by extension services and data collection services, data are collected quarterly from fish farmers.	Data Collector: Principal Director, Aquaculture, Director of Farm Management

Baseline: 911 MT	Target: ≥ 3400MT
Target Rationale: This level of production means that the industry will be able to supplement the needs of the local and international market for fish. It will aid in fish and nutritional security.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Improve and produce additional broodstock 2. Construction of new bio-secure Recirculating Aquaculture System (RAS) hatchery at the NFA's Aquaculture Division 3. Construction of quarantine facility and wet lab for the Authority. 4. Rehabilitation of existing mariculture facility at Bowden to facilitate oyster and sea moss diversification, as well as boosting production of oyster farms in other areas such as Sav-La-Mar and Hanover. 5. Capacity-Building for fish farmers.

Strategic Objective: To obtain ISO:9001 certification to strengthen the Authority's transition into a world class organisation by 2030.			
Output/Outcome: The NFA is ISO 9001 certified			
Indicator/Measure: % completion of certification requirements			
Lead/Lag: Lead	Frequency of Measurement: Annually	Unit Type: Percentage	Direction: Higher is better

Formula: Processes for the Authority are properly documented for the critical areas – Aquaculture, Capture Fisheries, Fisheries Compliance, Licensing and Statistics	
Data Source: Audit reports by ISO representatives	
Data Quality: High quality documented standards of the NFA which will stand up to the criteria set by ISO.	Data Collector: Senior Director, Corporate Services

Baseline: 0 (not certified)	Target: ISO 9001 Certification
Target Rationale: For the NFA to become a world-class, sustainable and economically viable organisation, the quality of service needs to be at the highest standard.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Engage ISO representative to monitor 2. Designate ISO focal point within the NFA 3. Assessment and situational analysis of the organisation 4. Continuous documentation and refinement of, processes 5. Internal and external ISO audits based on standards 6. Internal and external consultations

Strategic Objective: For the NFA to be equipped with the requisite resources and infrastructure to function effectively as a statutory body by 2028.			
Output/Outcome: An effective and fully resourced National Fisheries Authority.			
Indicator/Measure: % completion of recruitment			
Lead/Lag: Lagging	Frequency of Measurement: Quarterly	Unit Type: Percentage	Direction: Higher is better

Formula: The number of staff on board in comparison to the number required for each unit (HR, Finance, ICT etc.) and completion of ICT infrastructure	
Data Source: Human Resources record	
Data Quality: Strategic recruitment done timely and in accordance with GOJ guidelines	Data Collector: Senior Director of Corporate Services

Baseline: TBD (2021)	Target: 100%
Target Rationale: The Authority was established pursuant to the Fisheries Act and to transition, it needs to be fully compliant with these areas in order to function efficiently and effectively.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Continuous documentation and refinement of processes 2. Fulfil financial obligations in accordance with the FAA, PBMA and Fisheries Acts and applicable circulars. 3. Implement ICT and IT Management systems. 4. Identify and acquire port facilities 5. Identify and acquire suitable location with adequate space to house NFA staff. 6. Establish five regional NFA centres 7. Develop and modernise fishing infrastructure to benefit stakeholders

Strategic Objective: To strengthen the legislative framework by providing policy guidance for four key regulations to govern the fisheries and aquaculture sector by 2028.			
Output/Outcome: Regulations in place for the sector			
Indicator/Measure: % Completion of regulations			
Lead/Lag: Lagging	Frequency of Measurement: Quarterly	Unit Type: Percentage	Direction: Higher is better

Formula: Number of regulations for which policy guidance is provided	
Data Source: Legal Services Unit	
Data Quality: Through a thorough consultative process, regulations are drafted	Data Collector: Legal Service Unit

Baseline: 0 (2021)	Target: 4
Target Rationale: To facilitate the build-out of the Legislative framework of the Fisheries Act of 2018 pursuant to section 109, so as to enable the proper implementation of the Act and enable the Authority to carry out its functions thus achieving its mandate.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Internal and external consultations to inform the policy direction of the Regulations. 2. Internal and external consultations to inform drafting of provisions for Regulations. 3. Draft and submit key regulations for promulgation as law.

Strategic Objective: To introduce climate smart technologies and alternative livelihoods in fisheries by implementing 2 pilot programmes by 2027.			
Output/Outcome: Pilot Programmes implemented			
Indicator/Measure: % implementation of pilot programmes			
Lead/Lag: Lagging	Frequency of Measurement: Quarterly	Unit Type: Percentage	Direction: Higher is better

Formula: All components of the pilot programmes are implemented equates to 100% implementation.	
Data Source: Project Leads	
Data Quality: Accurate and comprehensive Project Reports	Data Collector: Capture Fisheries and Aquaculture Divisions

Baseline: 0 (2021)	Target: 2
Target Rationale: The Recirculated Aquaculture Systems (RAS) will be needed to conserve water in aquaculture production. A pilot project for introduction off offshore pelagic fishing will aid fishers in utilising sustainable fishing practices.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Implement Pilot project for introduction of offshore pelagic fishing 2. Implement Pilot project to construct Recirculated Aquaculture System (RAS) to conserve water.

Strategic Objective: To increase the percentage of fishers and fish farmers who are trained in fisheries and aquaculture management and production technologies by 100%, by 2028.			
Output/Outcome: Stakeholders trained in skills and technology solutions that will assist in their safety and benefit the fisheries sector.			
Indicator/Measure: # of fishers and fish farmers trained			
Lead/Lag: Lagging	Frequency of Measurement: Quarterly	Unit Type: Percentage	Direction: Higher is better

Formula: Count of fishers and fish farmers trained	
Data Source: Attendance registers and training reports from Capture Fisheries and Aquaculture	
Data Quality: Assessment of individuals who are trained to ensure that information is clearly understood.	Data Collector: Principal Director, Aquaculture Principal Director, Capture Fisheries

Baseline: TBD	Target: 248
Target Rationale: An increase in the number of fishers and fish farmers who are trained and certified in fisheries and aquaculture management and production technologies, will contribute towards a sustainable fisheries sector.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Train extension officers on fisheries and aquaculture management. 2. Partner with local and international training institutes and universities to provide training for stakeholders. 3. Facilitate the establishment of fisher organisations through the Authority's extension services.

Strategic Objective: To increase the fisheries contribution to the GDP to J\$35B, by 2027.			
Output/Outcome: Fisheries contribution to GDP is \$35 billion.			
Indicator/Measure: \$ contributed to GDP from fisheries			
Lead/Lag: Lagging	Frequency of Measurement: Annually	Unit Type: Percentage	Direction: Higher is better

Formula: Dollar contribution of fisheries production sector divided by total production of all other sectors in economy	
Data Source: National Fisheries Authority, STATIN, PIOJ	
Data Quality: Sound economic research techniques	Data Collector: Principal Director, Aquaculture Principal Director, Capture Fisheries Principal Director, Fisheries Compliance, Licensing and Statistics

Baseline: \$10B	Target: \$35B
Target Rationale: This level of contribution will indicate that fisheries and aquaculture contribute significantly, not only to food security but to the livelihood of its constituents.	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Monitoring and measuring of fish production 2. Socio-economic surveys of fishers and fish farmers 3. Identification and development of new markets 4. Development of fishery and aquaculture management plans 5. Institute development plans for new value-added products

Strategic Objective: To develop underutilised fisheries and diversify aquaculture production by 2028.			
Output/Outcome: New and underutilised fisheries developed			
Indicator/Measure: # of new and underutilised fisheries			
Lead/Lag: Lagging	Frequency of Measurement: Quarterly	Unit Type: Percentage	Direction: Higher is better

Formula: A count of the number of fish species cultured in aquaculture production systems and a count of the number of underutilised fisheries that are sustainably fished.	
Data Source: Research reports	
Data Quality: Proper monitoring of programmes and initiatives employed to develop underutilised fisheries and introduce new culture species.	Data Collector: Principal Director, Aquaculture Principal Director, Capture Fisheries

Baseline: 1	Target: 5
Target Rationale:	Initiatives/Projects/Activities: <ol style="list-style-type: none"> 1. Conduct research on underutilised fish species to determine viability, ease of commercialisation and feasibility for profit. 2. Provide technical assistance to fishers and fish farmers on mechanisms to maximise economic returns within the local market. 3. Leverage international and regional agreements to access new markets for underutilised fisheries and aquaculture species (e.g. expansion of tilapia, mariculture, tuna).
